

The blue and green work together!

Our weight loss combo, the TruFix and TruWeight&Energy synergistically work TOGETHER which means that IF you want LONG LASTING RESULTS then you MUST take them together and be CONSISTENT!

TruFix balances the blood chemistry... No matter if your BMI is too high or too low... Your body is balanced through your blood chemistry so that means that it is a WEIGHT MANAGEMENT system as it balances the body to a healthy and balanced BMI. TruFix assists in cleansing the liver, lowering Cholesterol and balancing blood sugar. All of these things go hand in hand with cleansing the body, losing weight and increasing energy.

Our weight loss combo is NOT a diet pill! It is a supplement. One that balances your body. It is NOT likely that you will balance your body overnight as you did not get unhealthy/overweight overnight AND it may take more time for some than others as our bodies are all different. When you commit to losing weight and getting healthy our weight loss combo, when taken consistently, will make that process so much easier. The TruFix is a MUST in this combo as it breaks away and dissolves that visceral fat.

Taking traditional "diet products" that are thermogenic, force your body to lose weight. When you force the body to lose weight, you also lose lean muscle mass and organ tissues can be depleted as well..... This is VERY unhealthy!! Low carb and low calorie diets can have this affect also.

TruFix and TruWeight&Energy are formulated as a combo. For optimal results you must take them together. This will ensure that you retain your lean muscle tissue and deplete only the visceral fat.

I see so many commenting and asking others "are you in the gym" or what is your "work-out schedule"? Well, when your lean muscle becomes healthier and the visceral fat stores are being dissolved this gives the appearance that you are working out. You will also notice less weight lost in the breast tissue and that is because the TruFix dissolves the visceral fat and breast tissue is subcutaneous fat.

This is why you will see the inches are coming off even when the weight remains the same....
Unlike most diet pills ours is not a thermogenic product.

▲▲Everyone Read this!!! ▼▼

Our bodies are all different, the longer you are on the combo the better it gets! It will not ever force your body to lose weight it is correcting your Blood Chemistry so your body can release the bad fat naturally. It will take time!

If your wanting and over night magic diet pill This Is Not It!!

TVH What It is and How it works...

This product... "The Combo" is a blood chemistry product it was created for type two diabetics to level blood sugars and insulin, lower [cholesterol](#) and blood pressure the side effect is weight-loss so they've enhanced it for that, this product is so beneficial for everyone because it levels out your blood chemistry and your blood is responsible for feeding your organs so if your organs don't get what they need they start pulling from other parts of the body which causes all kinds of problems!

Literally everyone should be on these products, they are amazing you'll notice the first day that you feel different... you'll feel better, your mood will be enhanced, most have more mental clarity and more energy and it will kill your cravings! You've got to keep in mind that this is a long-term product it's probably more important for us daily than multivitamins (not to say multivitamins aren't important).

Some people lose weight really quickly and it's not uncommon to lose 5 to 10 pounds the first week... most do! I on the other hand some Don't!! I was in the probably 15-20% that did not. I was into my third month before I dropped any weight and then boy did it start coming off but I didn't get the boost of energy that most donut were all different! So it works on everyone (everyone that sticks with it and does not give up and quit) the only people that it won't work for are the ones that quit within the first 90 days, they don't understand how it works and give up because they didn't lose a few pounds in the Trial period or those first 90 days so keep that in mind to pay more attention to how you feel and know you could drop a bunch of weight in the first week but no guarantee that your body will work that way, we are all different! it really works if you give it the time it needs to balance your Blood Chemistry!

Dave Brown (The Formulator) said it could take 1-2 years for your blood chemistry to completely balance out, SO STICK WITH IT, Its Worth It!
